This parts manual has exploded views of all parts on the tractor. With numbered pictures giving you great detail on assembly and disassembly. It also gives you a guide, with numbers, for ordering parts, and makes you seem much more informed when talking to the dealer. Many service manuals, after telling you how to disassemble, in detail, and how to repair, will simply say reassemble. The parts manual can

help you out with an exploded view of the unit, and you can see immediately how it all goes back together. You need the parts manual!<http://www.eagleeyebird.com.au/files/canon-ir1023-manual.xml>

The importance of servicing the air cleaner and precleaner cannot be over emphasized. This maintenance is important and will help insure maximum tractor performance and prolong the life of the engine.

The air cleaner should be serviced when the red signal is stationary in the restriction indicator window. The indicator is located beneath the intake manifold on the diesel engine Inset E, and on the carburetor intake tube on the spark ignition engine, Inset G. To reset the indicator after air cleaner servicing, start the engine and press the reset button in, and release. If the clear signal appears, the indicator is functioning properly. If the red signal remains, press the reset button several times. If the red signal still does not disappear, check the indicator as described on Page 4 and 5 of the manual. The manuals detailed diagrams and exploded views can really help the DIY tractor mechanic get the job done the right way. The fuel transfer pump is a constant volume, positive displacement type plunger pump which is mounted on the side of the injection pump and driven by a cam or injection pump camshaft. Refer to Fig. 45 for a schematic view of fuel system. On all models a water trap and drain cock is located in the bottom of the main fuel tank. It is recommended that a small quantity of fuel be drained from the trap each day to prevent water accumulation. 48. FUEL FILTERS. Fuel filters are of the spinon type Fig. 46. Filters are available in a kit which consists of both units and both should be renewed each 500 hours, when noticeable power loss occurs, or when the fuel pressure gauge needle is in the red zone if so equipped.

To renew the filters, first clean filter head, elements and surrounding area. Shut off fuel at the fuel tank and remove the drain plug from the bottom of 1st stage filter. Use a clamp type filter wrench which is supplied with the tractor to remove the filters. Remove and discard the gasket located on final filter mounting stud. Lightly oil the gaskets on new units and on mounting stud, install new units and hand tighten and $\frac{1}{2}$; to $\frac{3}{4}$; turn after contacting gasket surfaces. DO NOT overtighten. Bleed the system as outlined in paragraph 50. To disassemble the coupling socket female half, depress locking sleeve 9 and unseat locking snap ring 10, then remove locking ring, sleeve, spring 8 and the eight locking balls 6. Unscrew socket body 5 from hose 1 and remove piston 3 and spring 2. Coupling plug male half can be disassembled after unscrewing plug body 11 from hose 16. A repair kit is available which provides normal service items for both halves. MB emailed me, I clarified, and it was here in two days. I haven't had a chance to use it yet, but I did read through the section about hydraulics and it appears to be very helpful. Maybe not as detailed as a tech manual but a tenth the cost.
